Greetings!

We are in the last days of the 2017 Maryland General Assembly, and we hope you have been following our updates and action alerts about the pollinator habitat bills (SB386 and HB830). Your e-mails and calls to legislators make a BIG impact on how bills progress. Thank you!

Please stay tuned for one more action on the Pollinator Habitat bill to help ensure that pollinator habitats planted on state land will be free of bee-killing pesticides.

As always, we have all the breaking news, research and tips "fit to print," including a UN report denouncing the myth that pesticides are necessary to feed the world, tips for starting a beehive in your own backyard, and what raw foods to avoid. We would especially like to draw your attention to our Vote With Your Wallet & Fork - Go Organic! campaign tips, which we hope you will find beneficial.

Please let us know what you’re most interested in, so we can make sure we are meeting your needs. Send us an e-mail and say hello!

We appreciate your feedback on our monthly newsletter!: info@mdpestnet.org

Take Action - Go Organic!

When you purchase organic products - from the food we eat to our sheets, mattresses, cosmetic and cleaning products to our lawn care - you are casting a vote with your wallet for your family’s health and the future of our babies, bees and the Bay. Organic soil also sequesters carbon and helps us address climate change. If you make a decision to add a new organic product to your life- we would like to know! Write us at info@mdpestnet.org. With your permission, we will add your comment to our newsletter.
A group of European researchers have concluded that organic food production has several benefits for human health. Read more.

The Washington Post reports that, while the food industry won’t be ditching pesticides any time soon, we easily can. Read more.
